

Universal Display

WHO ARE WE

Universal Display is a premier manufacturer of display products, mannequins and bust forms. Established in 1951, the company has remained under the stewardship of the founding family, upholding a legacy of excellence and innovation.

As a global business, we operate offices in London, New York, Budapest, and Xiamen. Our UK headquarters in West London encompasses, design and development department, warehousing and distribution center. In the USA, we maintain distribution hubs on both the East and West Coasts. Additionally, we operate a modern joint-venture factory and offices in Zhangzhou, China, as well as a buying office in Taipei, Taiwan. With manufacturing experience in the Far East dating back to the 1980s, we bring unmatched expertise to every project.

Our London-based design and development team oversees all aspects of product creation, from initial design concepts to fulfilling bespoke client requests. Utilizing our in-house designers, we produce master mannequins and props in London, which are then electronically transferred to our Chinese facility for production. This streamlined, end-to-end process allows us to deliver one of the most comprehensive custom services in the industry, ensuring exceptional results with meticulous oversight.

Our primary manufacturing facility in China produces a diverse range of products, including over 3,000 mannequins per month and various small and large scale props. Serving as a seamless extension of our UK operations, this production hub is backed by stringent quality control measures to ensure our consistently high standards are maintained throughout every stage of the process.

Our expert team ensures fast turnaround times, precise control over production, and a cohesive aesthetic across entire product ranges. The result is a superior-quality product tailored to our clients' unique specifications.

The strong relationships we have built with major global retailers and display companies are a testament to the dedication and expertise of our teams in both the UK and China. This synergy of innovation, craftsmanship, and global reach continues to fuel our success.

HOW WE DO IT

We are a highly scalable business, enabling us to minimize overhead costs and pass these savings on to our clients. Our core team of seasoned professionals excels across all necessary fields, ensuring the production and delivery of high-quality products.

Our long-standing relationships with domestic and international shippers, combined with strategically located hubs in key cities worldwide, streamline our distribution process. This network ensures our products are delivered promptly and in excellent condition, no matter the destination.

With years of experience as a “roll-out” company, we specialize in managing high-volume projects. Our extensive workforce and large facilities in China allow us to assemble and allocate goods at the source, reducing local distribution time. Additionally, our skilled teams in the UK and USA are adept at handling same-day, large-scale roll-outs, an essential service for many of our clients.

Being part of a joint-venture plant in China provides us with significant advantages in cost-effective production and complete process control. This ensures every product meets the original specifications and our uncompromising quality standards. Our flexible production capabilities also allow us to adapt swiftly to client demands, delivering exceptional results, even under very tight deadlines.

WHY US

With our established infrastructure and extensive experience in design, production, and roll-outs for major retailers, we are fully equipped to meet your requirements efficiently and seamlessly. Our commitment to delivering superior products at very competitive prices ensures you receive exceptional value without compromise.

HOW WE WORK

We are a highly organized and cohesive team, with each staff member assigned a specific role, ensuring clear responsibility and accountability within departments. Our clients have direct access to senior management and we provide a list of phone numbers and mobile contacts to ensure you can always reach the relevant person. As mentioned, we are scalable and can respond to any specific task no matter what size.

SERVICES

The following services relate to mannequins, bust forms and all other display related items:

3d Design

Renders

CAD

Prototyping 3d printing

Manufacture

Distribution

After-sales service

3D DESIGN

Based on your brief, we collaborate closely to design products that align perfectly with your brand's unique needs. Starting from a discussion, a client sketch, mood boards, or rough drawings, we create digital concepts that allow for easy adjustments and material rendering. This process provides a clear visualization of the final product and demonstrates its functionality within specific environments.

Our services include 3D scanning of items such as shoes, handbags, and the human form, providing the ability to duplicate, scale, or re-purpose assets for new designs.

We can also convert 3D files into production-ready designs and process assets for digital promotions or animations. At Universal Display, we have seamlessly integrated digital sculpting and 3D printing into our work flow, replacing traditional clay methods to deliver exceptional results.

A large, light gray, stylized number '5' is positioned on the left side of the top half of the page, partially overlapping the dark gray background.

PROTOTYPING

Once the initial concept is approved, we can develop a new product or adapt an existing one to meet your specific needs. Using our extensive range of 3D printers, we bring concepts and prototypes to life with cutting-edge 3D printing technologies, enabling the creation of intricate geometric forms previously unattainable through traditional methods. Rapid prototyping of full-size or miniature 3D prints allows customers and directors to visualize ideas clearly before advancing to full-scale production. We select the most suitable technology for the task, and the printed parts are meticulously finished and sprayed to create a master prototype ready for moulding. Upon final approval, we produce high-quality production moulds to ensure precise manufacturing standards. By continuously integrating innovative materials and techniques, Universal Display remains at the forefront of design excellence and technological innovation.

MANUFACTURE

Products will be manufactured at our China facility, ensuring cost efficiency and swift production. We use only premium materials and fittings in our products, with many materials imported from outside China to maintain the highest quality standards. Each item undergoes strict quality control and is meticulously packed for global distribution. Bespoke hand painting, water transfers, custom designs, makeup and wigs can also be provided to meet specific design requirements.

DISTRIBUTION

Once goods arrive from China, either by container or air freight, the shipments are unpacked and sorted for distribution. We conduct additional quality checks before sending the products through our trusted delivery partners across the region and to international stores. Throughout the process, all shipments are tracked and your account manager stays updated on the status and location of your deliveries. Additionally, we offer storage services on a rolling basis, tailored to your specific needs.

AFTER SALES SERVICE

We offer a comprehensive range of services, including renovation, resprays, makeup, and replacement wigs. Items can be collected from stores, serviced as required, and returned efficiently. Additionally, we are always contactable and offer direct support for inquiries or requests for further services.

SUSTAINABILITY

At Universal Display, we deeply understand, just as you do, the profound global impact of environmental changes on our communities and future generations. We share a mutual commitment to leaving the planet in a condition that is equal to or better than what we inherited.

We value the opportunity to collaborate with you in creating exceptional products. Now more than ever, we recognize the importance of being mindful in our creative process, ensuring that what we produce is truly sustainable. That's why we have significantly intensified our focus on sustainability in recent years.

We are constantly exploring and experimenting with new materials and processes. While we acknowledge that we have not yet reached our ultimate goals, we are committed to a positive and forward-thinking journey toward sustainability, driven by our shared values and unwavering determination.

SO HOW ARE WE GOING TO DO THIS?

At the core of our operations lies design and research, intertwining seamlessly across our products, materials, and production processes. Our approach embodies a circular process, where each stage informs and connects with the next.

Recognizing the significance of product end-of-life management for our clients, we're more attentive than ever. We stand ready to assist you in navigating this crucial aspect, ensuring sustainability and responsible stewardship every step of the way.

SUSTAINABILITY DELIVERED THROUGH INNOVATION

Over the last few years we have changed the way we work, our work-flow has moved from the traditional analogue methods of creation, to a more powerful and faster digital form. We digitally sculpt products for clients, the output of which can be reviewed in various digital formats and edited at will.

SO HOW DOES THIS HELP SUSTAINABILITY?

With the switch to digital content, files can be reviewed by clients in various digital formats from PDF, AR and VR. This cuts down the time the client has to travel to see the product in the initial stages, if at all. Once the final product has been approved, the design files can be digitally expedited within the hour to our manufacturing facility. Traditionally a master would have been made using various materials like clay and resin and then shipped to our manufacturing base by sea or air for moulding. The digital format cuts down on shipping and packaging, the digital files are 3D printed locally and a master is produced for production. In summary, these new methods are quick, they greatly reduce the need for raw materials, shipping and packaging materials.

We offer a wide range of sustainable and recyclable products. Our ongoing investment in research and development ensures that we consistently meet the evolving needs of our clients. We take pride in delivering products that truly live up to their promises.

While many claim to offer bio-resin mannequins, a closer look often reveals that the biomass content is minimal. We're here to guide you in selecting the right materials that align with both your future goals and budget. Whether you're a small boutique needing a few mannequins or a multinational corporation requiring large volumes, we have a solution tailored for you.

From design and production to delivery, we provide comprehensive support to help you achieve your sustainability objectives. We are constantly researching and innovating to find the best options for your business and future generations.

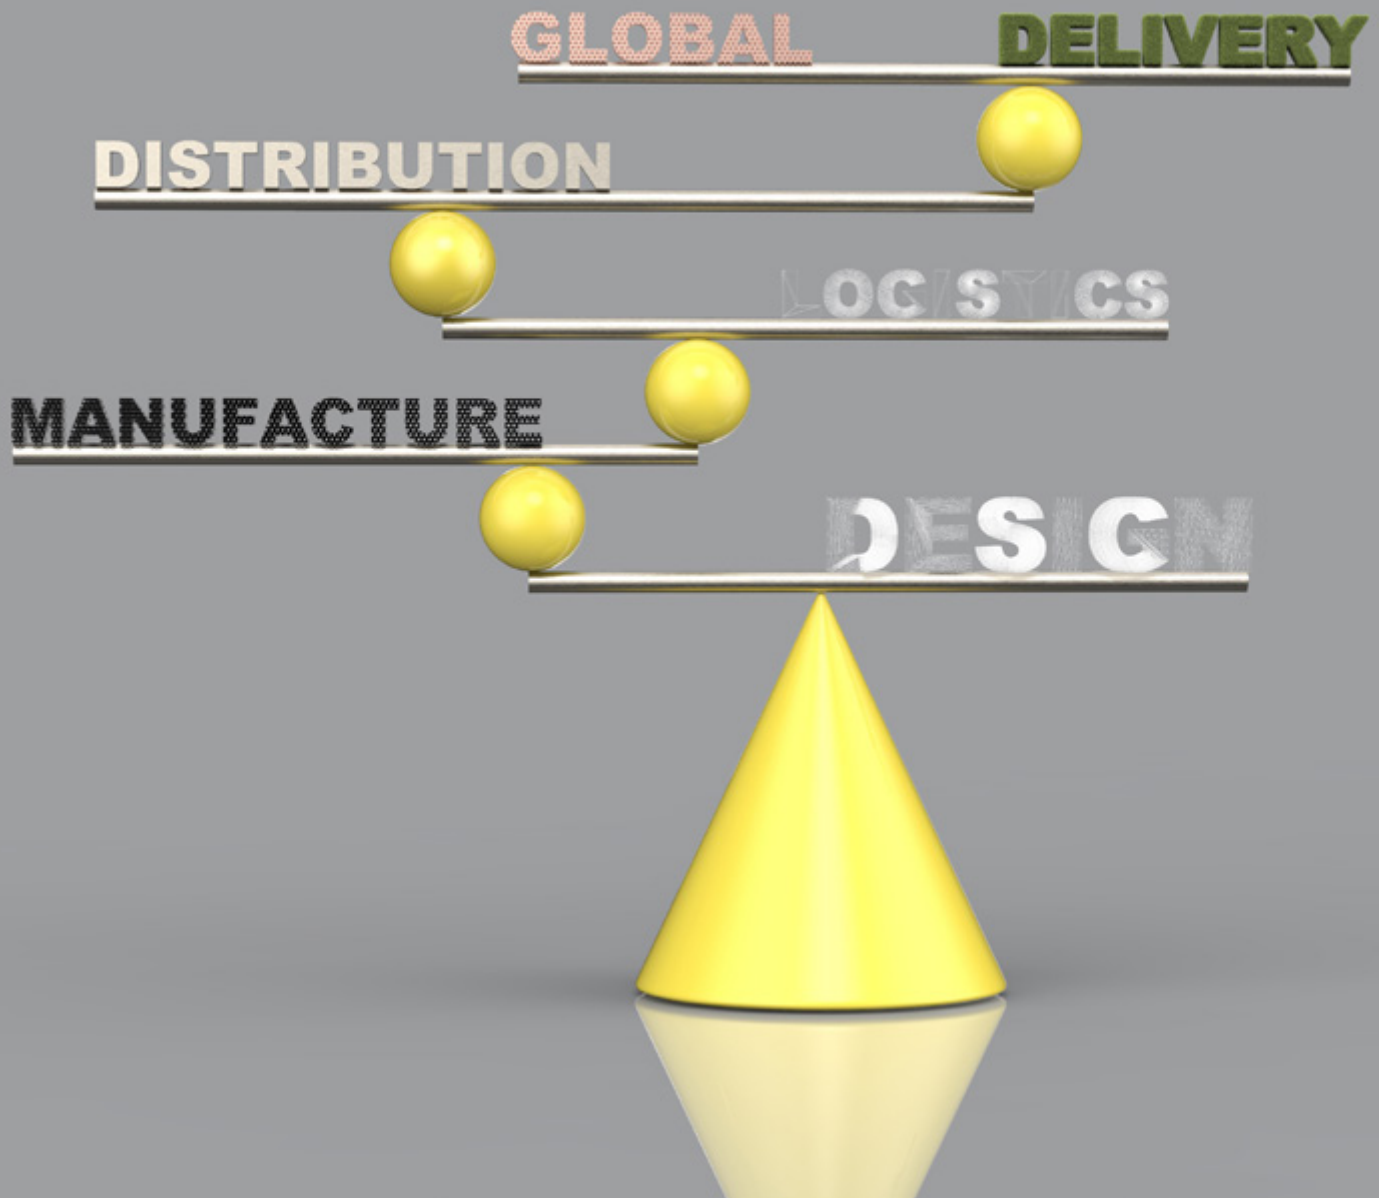

SUMMARY

We are uniquely positioned to meet your needs quickly, efficiently, and cost-effectively. Whether fulfilling your current design requirements or adapting to future ones, our in-house team of experienced experts ensures smooth and seamless execution.

Our manufacturing facility, unmatched in China, provides affordable solutions and faster production times without compromising on quality. With the backing of a strong distribution network and a dedicated support team, we guarantee reliable service every time.

Proud of our reputation for exceeding client expectations, we continue to grow as a trusted, high-quality brand and a dynamic, expanding business.
